IPCam网络摄像头

- 1、如何编译IPcam
- 2、配置板端资源以及环境
- 3、参数配置及运行效果
 - 3.1参数配置文件
 - 3.2运行效果
 - 3.2.1 GC2093摄像头
 - 3.2.2 OV5764摄像头

IPCam网络摄像头

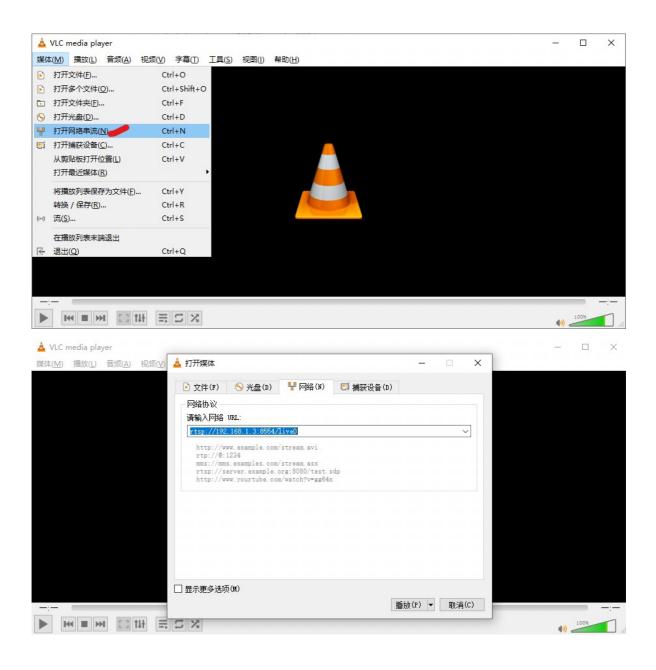

1、如何编译IPcam

- # 配置编译环境
- 1.cd cvi_media_sdk/
- 2.source build/cvisetup.sh
- 3.defconfig cv1812h_wevb_0007a_emmc
- 4.build_all

编译sdk

2、配置板端资源以及环境

```
1. 通过NFS或者sd卡把下面内容拷贝到板端/mnt/data/
  cvi_media_sdk/middleware/v2/sample/ipcam/mars/ipcam_mars
  cvi_media_sdk/middleware/v2/sample/ipcam/parameter/mars/param_config_ai.ini
  cvi_media_sdk/middleware/v2/sample/ipcam/resource/ai_models/mars
  cvi_media_sdk/middleware/v2/sample/sensor_cfg/sensor_cfg.ini.gc2053+gc2093
  cvi_media_sdk/middleware/v2/sample/sensor_cfg/sensor_cfg.ini.ov5647
  并且把mars 目录名改成ai_models、sensor_cfg.ini.gc2053+gc2093/sensor_cfg.ini.ov5647
改名为sensor_cfg.ini:
  mv mars ai_models
 mv sensor_cfg.ini.gc2053+gc2093 sensor_cfg.ini
2.isp参数文件和库文件路径:
 export LD_LIBRARY_PATH=$LD_LIBRARY_PATH:/mnt/system/lib/
  cp /mnt/cfg/tmp_secure/cvi_sdr_bin /mnt/data
2.连接网线并且配置板端网路:
 ifconfig eth0 192.168.1.3 netmask 255.255.255.0
  并且把PC端的网络配置成 在同一网段。
3.运行IPCam
  ./ipcam_mars -i param_config_ai.ini &
4.通过PC端的VLC连接板端的rtsp 看视频流
 连接地址为:
  rtsp://192.168.1.3:8554/live0 # 大码流
  rtsp://192.168.1.3:8554/live1 # 小码流
```

3、参数配置及运行效果

3.1参数配置文件

打开文件param_config_ai.ini,部分配置如下,默认即可

屏幕显示对象配置

```
= 500
                                ; 显示区域的左上角点坐标(横轴)
x1
у1
            = 500
                                ; 显示区域的左上角点坐标(纵轴)
            = 100
width
                                : 显示区域宽度
          = 100
height
                               ; 显示区域高度
filled
           = 0
                               ; 是否填充
thickness
         = 4
                               ; 显示边线粗细
[osdc_obj_info1]
bShow = 1
           = 2 ; 0: rect, 1: bitmap, 2: line, 3: buff
type
          = 0xff00ffff
color
           = 800
x1
           = 800
у1
          = 1000
x2
          = 1000
y2
thickness = 4
[osdc_obj_info2]
bShow = 1
type
          = 0 ; 0: rect, 1: bitmap, 2: line, 3: buff
          = 0xff00ffff
color
x1
          = 1000
y1
          = 1000
width
          = 200
          = 200
height
filled
          = 1
thickness = 4
. . . . . .
```

屏幕显示元素配置

```
. . . . . .
; osd config
[osd_config]
osd\_enable\_all = 1 ; 是;否使能所有显示元素 osd\_cnt = 12 ; 是;否使能所有显示元素数目
; osd attach to main streaming
[osd0]
                    ; 显示使能
            = 1
show
            = 0 ; 句柄号
handle
type
            = 2 ; 0:TYPE_PICTURE, 1: TYPE_STRING, 2:TYPE_TIME
               ; 0: 图片类型 1: 字符类型 2: 实时时间类型
          = 6 ; 6: CVI_ID_VPSS ; 模块号
mod_id
                                 ; 设备号
dev_id
             = 0
chn_id
            = 0
                                 ; 通道号
            = 20
s32x
                                 ; 显示区域起始点坐标
s32y
            = 20
                                ; 显示区域宽度
rec_width = 24
rec_heigh = 24
                                 ; 显示区域高度
```

```
[osd1]
show
            = 1
handle
           = 1
type
            = 1; 0:TYPE_PICTURE, 1: TYPE_STRING, 2:TYPE_TIME
mod_id
dev_id
            = 6 ; 6: CVI_ID_VPSS
            = 0
chn_id
            = 0
s32x
            = 20
            = 60
s32y
rec_width = 24
rec_heigh = 24
str
           = "cvitek main streaming demo" ; 字符内容
[osd2]
             = 1
show
            = 2
handle
type
            = 1; 0:TYPE_PICTURE, 1: TYPE_STRING, 2:TYPE_TIME
           = 6 ; 6: CVI_ID_VPSS
mod_id
            = 0
dev_id
chn_id
             = 0
s32x
            = 20
s32y
            = 100

           = 24
rec_heigh
           = 24
            = "北京晶视智能科技有限公司"
str
```

配置模型参数(以face_detection为例)

```
. . . . . .
[ai_fd_config]
fd_enable= 1; 人脸检测使能fr_enable= 1; 人脸识别使能mask_enable= 0; 口罩使能capture_enable= 1; 捕获使能(开启的话需要挂载sd卡到/mnt/sd,系统检测到人脸一定
时间会保存图片到sd卡)
face_ae_enable = 0
                             ; 视频处理子系统组号
; 通道号
vpss\_grp = 4
                  = 0
vpss_chn
fd_poolid
                  = 6
                  = 960
grp_width
grp_height
                  = 540
model_width

      model_width
      = 768
      ; 模型宽度

      model_height
      = 432
      ; 模型高度

      vpssPreProcSkip
      = 0
      ; 跳过视频处理预处理使能

      threshold_fd
      = 0.7
      ; 人脸检测阈值

                   = 0.7
                                ; 人脸识别阈值
threshold_fr
threshold_mask = 0.7
                                ; 戴口罩人脸检测阈值
model_id_fd
                 = 30
;0:CVI_AI_SUPPORTED_MODEL_RETINAFACE;30:CVI_AI_SUPPORTED_MODEL_FACEMASKDETECTION
model_id_fr = 6 ;3:CVI_AI_SUPPORTED_MODEL_FACERECOGNITION
model_id_mask = 7 ;7:CVI_AI_SUPPORTED_MODEL_MASKCLASSIFICATION
```

```
model_path_fd = "/mnt/data/ai_models/retinaface_mask.cvimodel" ; 模型路径 model_path_fr = "/mnt/data/ai_models/cviface-v5-s.cvimodel" model_path_mask = "/mnt/data/ai_models//mask_classifier.cvimodel" ; 检测框设置 color_r = 7.0 color_g = 10.0 color_b = 230.0 color_size = 4
```

3.2运行效果

该系统实现了人脸检测和识别、运动检测、行人检测等功能

note:以人脸检测为例,图中红色为人脸检测绘制框,蓝色框为屏幕显示元素

3.2.1 GC2093摄像头

3.2.2 OV5764摄像头
